

Title Slide

- Project Title
- Student Name
- Roll No / Batch
- Course: ML Mini Project
- Guide Name
- Institute Name

Problem Statement (Revised)

- Final problem definition
- Input → Output clearly defined
- Real-world use case

Dataset Details

- Dataset source
- Number of samples
- Feature description
- Sample data snapshot

Data Understanding

- Types of data (numerical/categorical)
- Missing values
- Data distribution insights

Preprocessing Plan

- Handling missing values
- Encoding categorical variables
- Normalization/Scaling

System Block Diagram

- Input → Processing → Model → Output
- Insert diagram image

UML Diagrams

- Use Case Diagram
- Activity Diagram

Algorithm Selection

- Algorithms shortlisted
- Reason for choosing each
- Baseline model

Feature Selection

- Selected features
- Justification
- Any domain knowledge used

Evaluation Metrics for Project

- Accuracy
- Precision / Recall
- F1 Score
- Why these metrics?

Tools & Technologies

- Programming language
- Libraries used
- Platform/tools

Initial Implementation

- Data loaded successfully
- Preprocessing done
- At least one model trained

Initial Results

- Model Accuracy
- Confusion matrix (optional)
- Observations

Challenges Faced

- Data issues
- Implementation challenges
- Understanding difficulties

Plan for Next Phase

- Model improvement
- UI/Deployment plan
- Paper writing start

Deliverables

- Deliverable 1: Dataset file.csv or image dataset
- Deliverable 2: Jupyter Notebook
 - Must contain: data loading,
 - Preprocessing
 - 1 model
- Deliverable 3: GitHub
- Deliverable 4: Block diagram image

References

- Dataset source
- Research papers
- Other resources
